

Stone paper is made of 80 to 90 percent crushed stone! It has no chemicals or toxic liquids.

Whether or not you can use stone paper underwater is a matter of your pen and not our paper. If you find a pen that writes while underwater.

Stone

Paper

Stone paper can be recycled just like normal paper.

Stone paper is different to normal paper because it is waterproof, tear resistant, has no ink bleed, it is brighter and smoother than normal paper.

Eco

One Metric Ton of stone paper saves: 18 large timber trees, 2770 litres of water, 950kg of CO2 and 4720 kilowatts of energy!

You do not mine the stone and rock to make the stone paper. You get the stone from waste quarry's and waste from construction places.
